

Multi-Omics with Galaxy for Diverse Biological Applications

Tim Griffin and Pratik Jagtap
University of Minnesota

Outline

- Galaxy-P and mass spectrometry-based proteomics multi-omics data analysis
- Multi-omics application 1: Proteogenomics
- Multi-omics application 2: Metaproteomics
- Access and Questions

Mass spectrometry-based proteomics as a center-piece of multi-omics

Raw MS/MS spectrum

Protein sequence and/or DNA sequence database search

Direct identification of 1000s proteins from complex mixtures

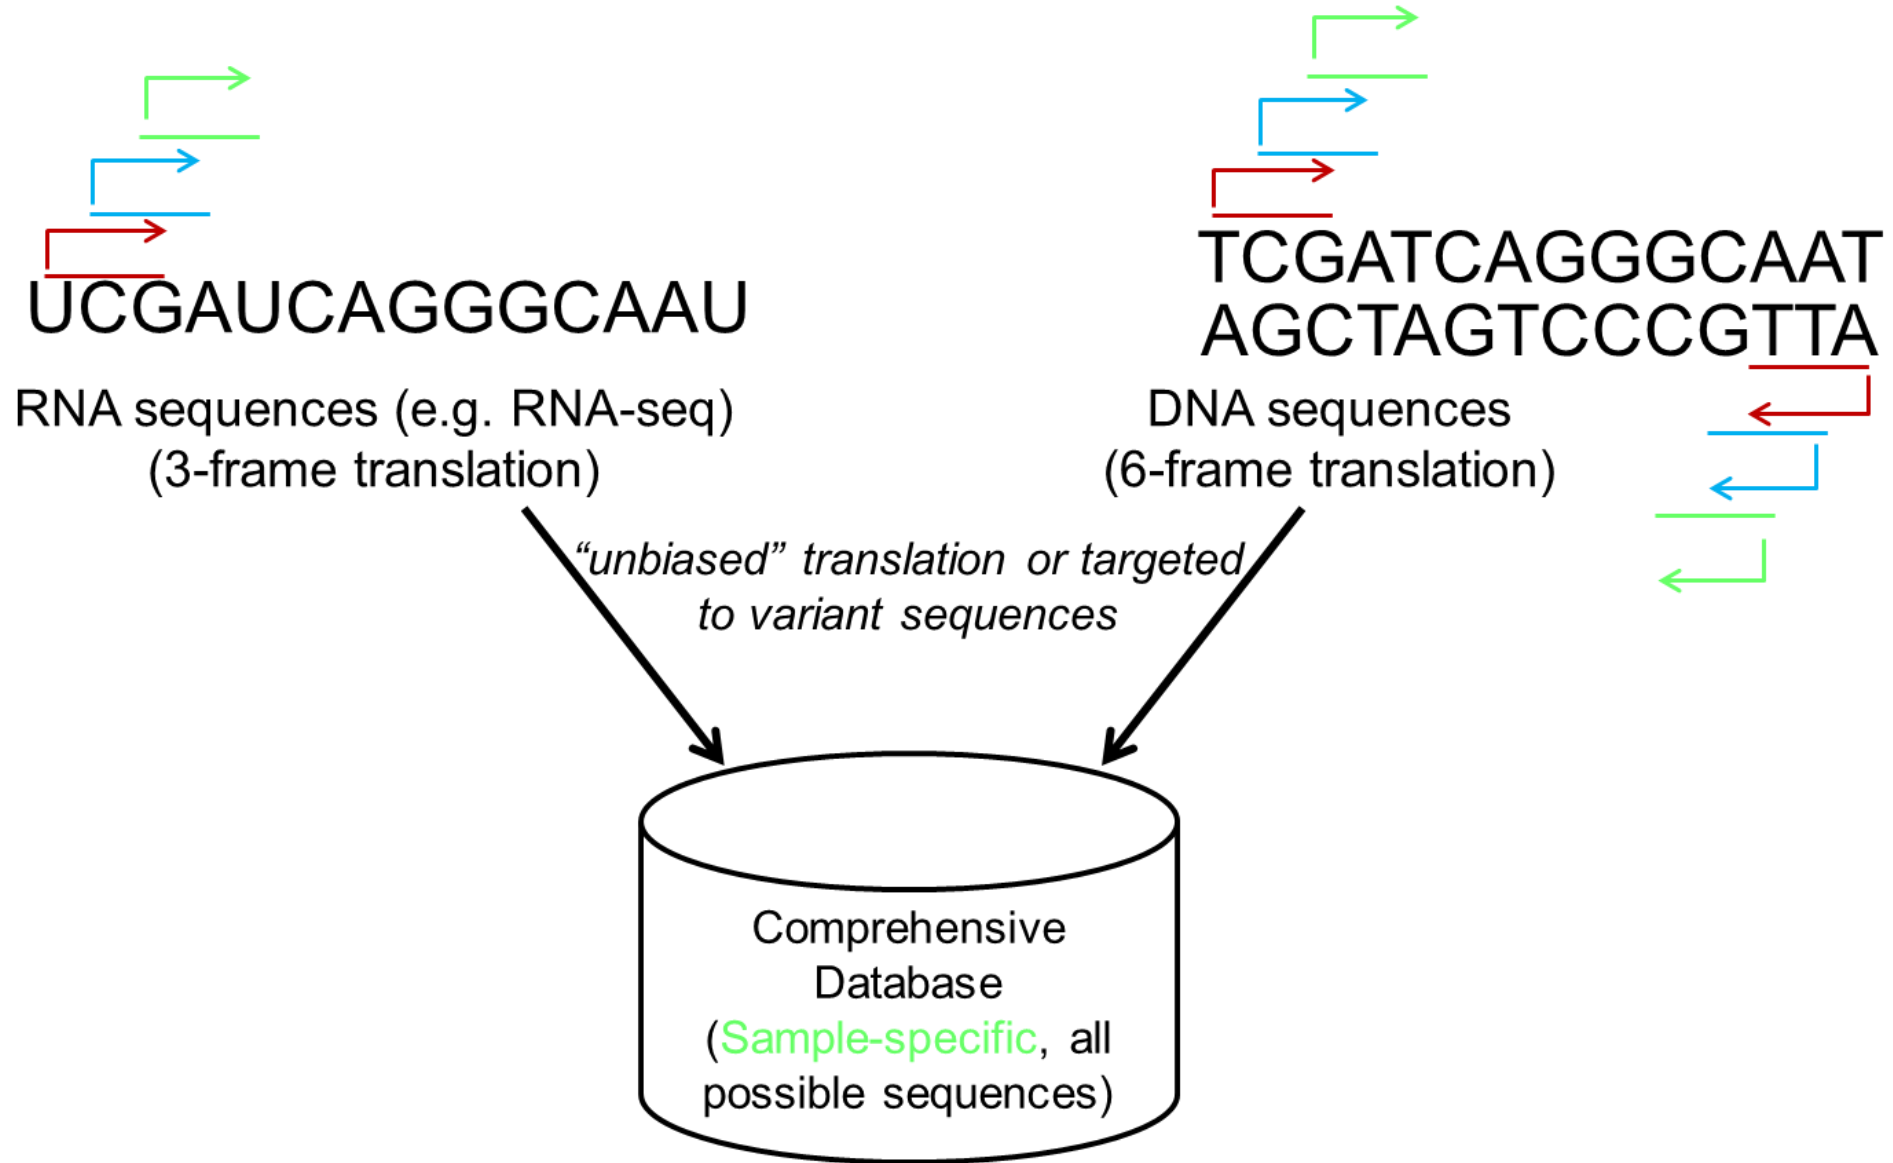

Peptide sequence match

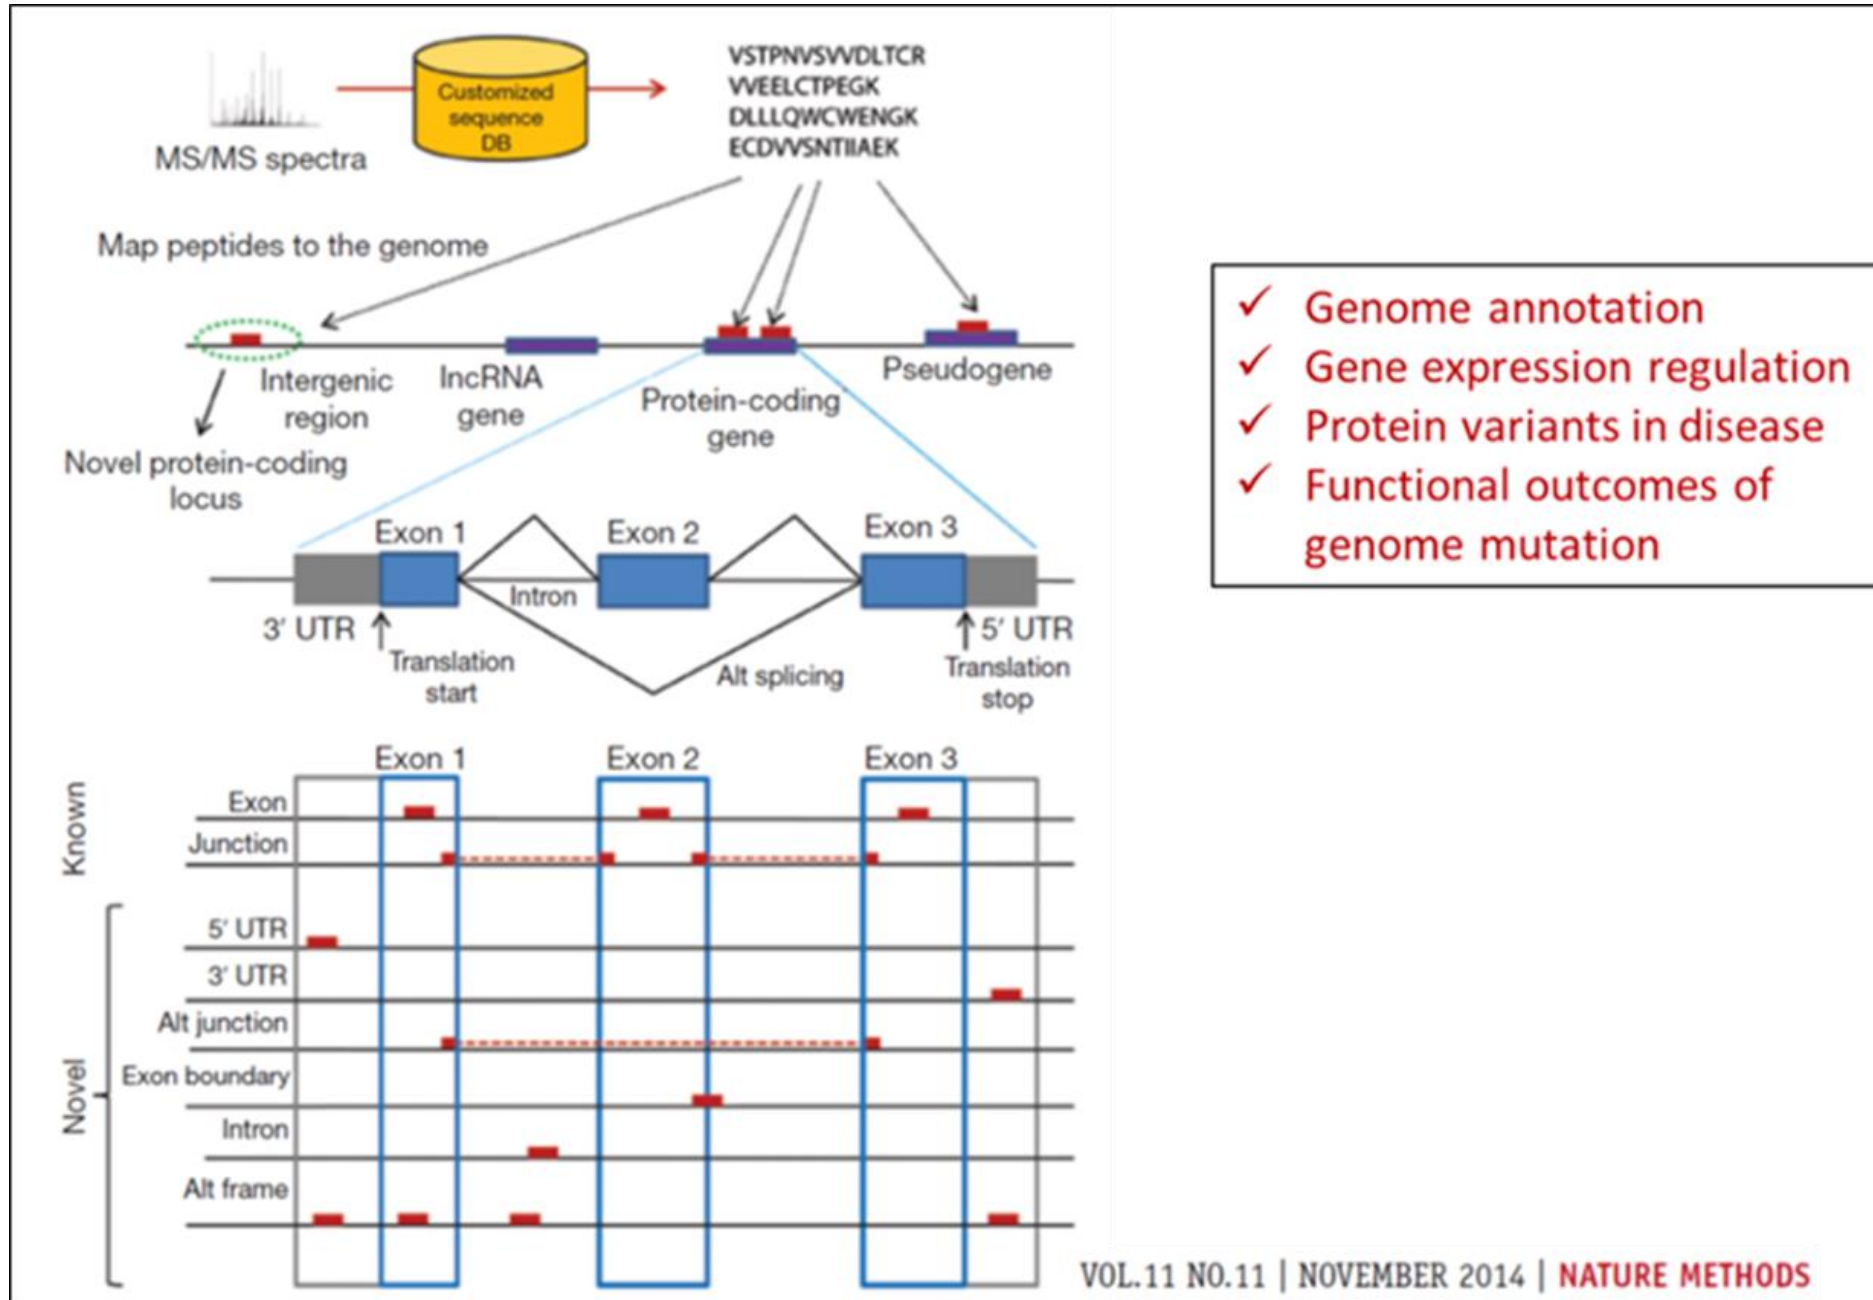

Protein identification

Proteogenomics: enabling more comprehensive identification of proteomes

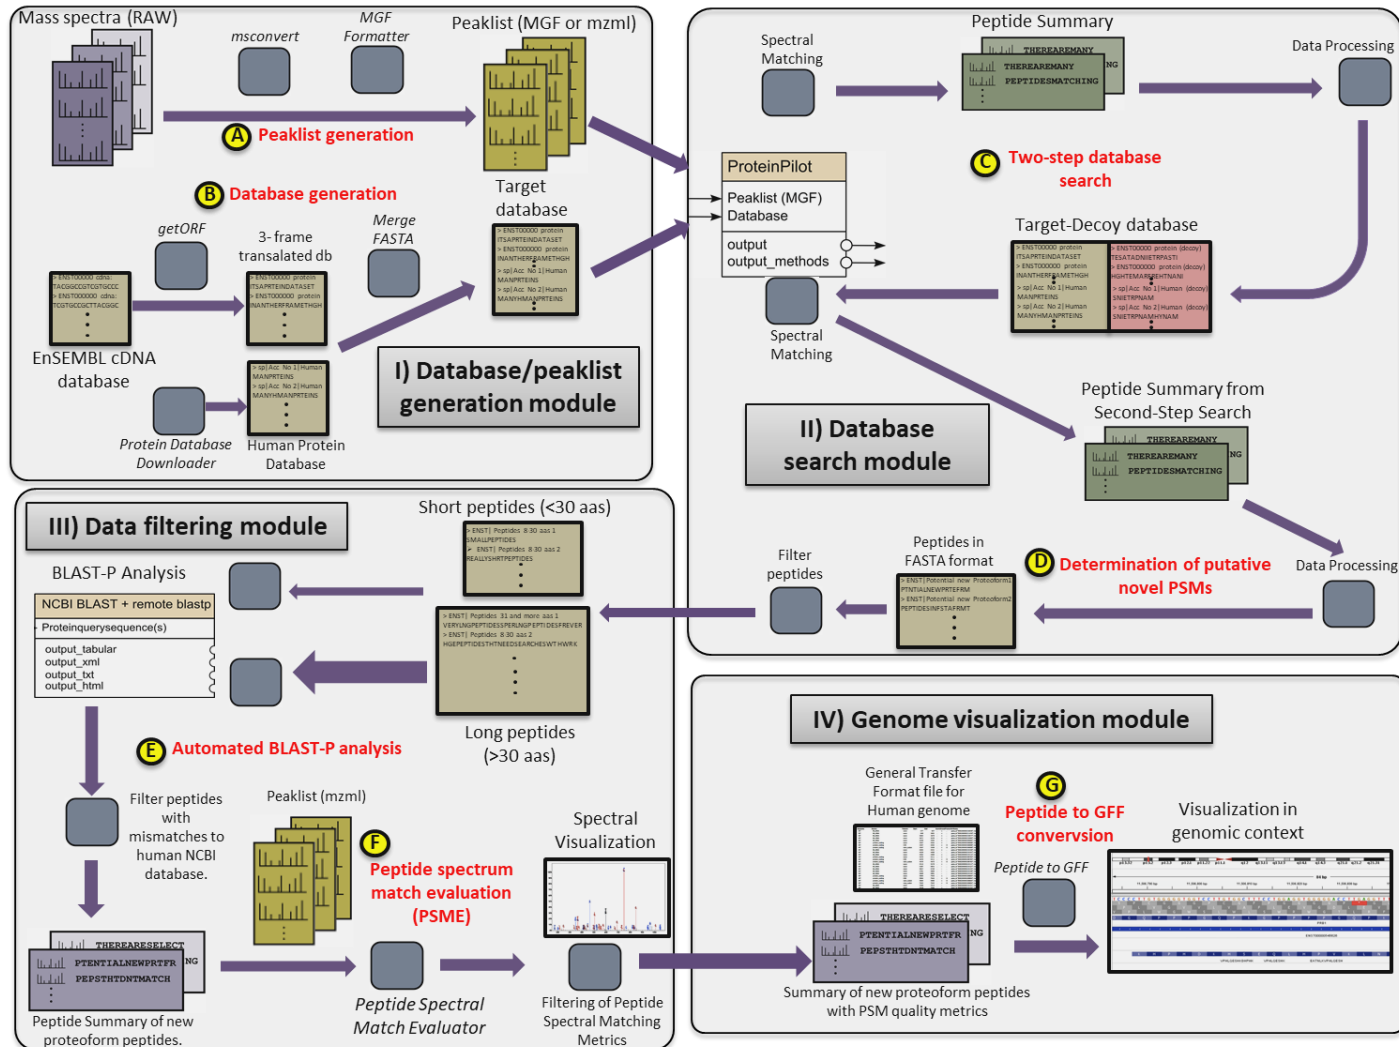

Potential results generated by proteogenomics

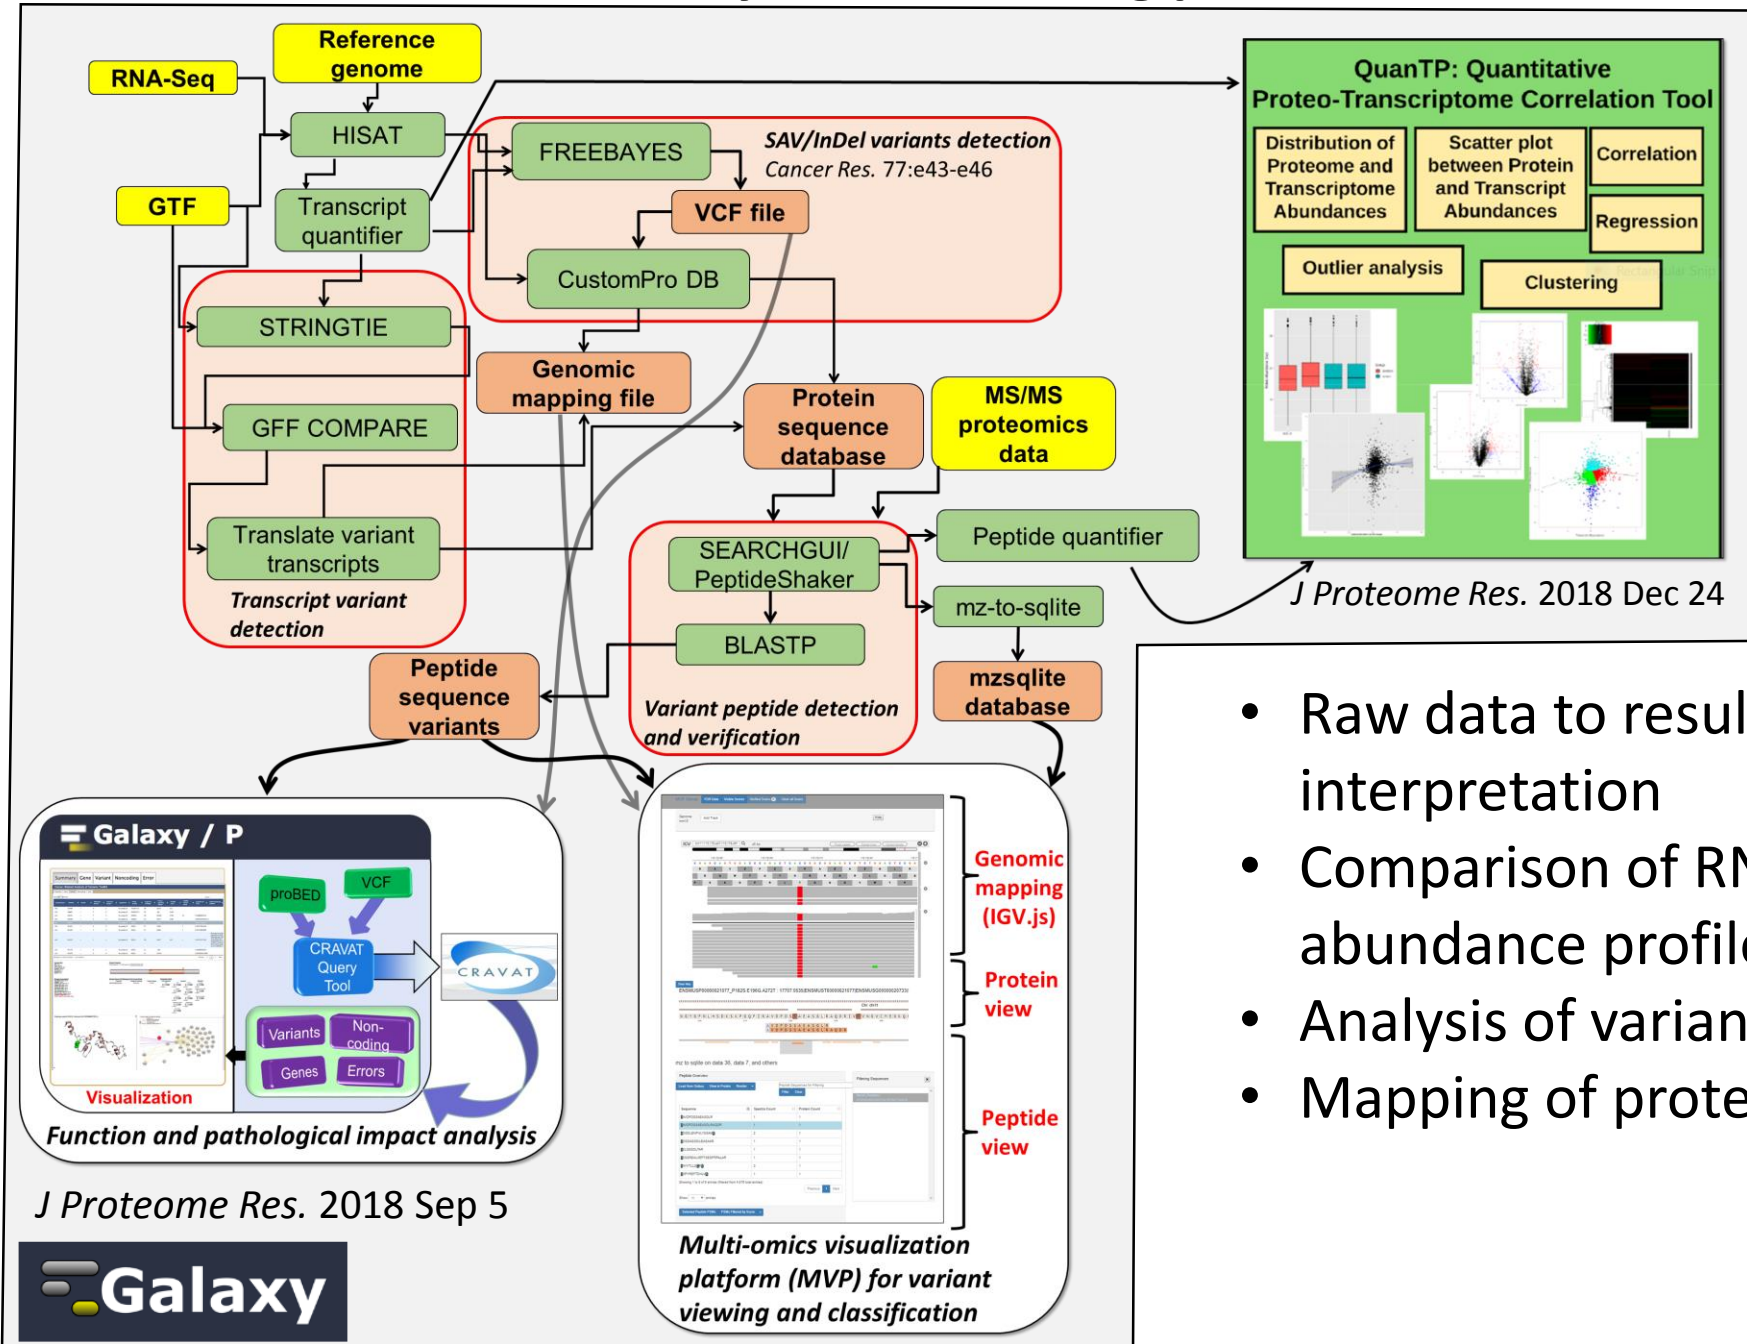

Bioinformatic requirements of proteogenomics

- Software – sophisticated, multi-step workflows

- Customized dB generation
- Matching sequences to MS/MS data
- Filtering and QC!
- Interpretation! Beyond a list....

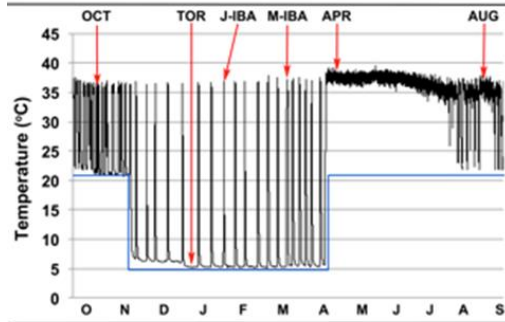

Galaxy as an enabling platform

- Raw data to results viewing and interpretation
- Comparison of RNA and protein abundance profiles
- Analysis of variant impact
- Mapping of proteins to genomes

Example Applications -- Proteogenomics of Ground Squirrel Hibernation

A Ground Squirrel Circannual Cycle

C Identification Summary Table

	Heart 1	Heart 2	Heart 3	Total
Total Spectra	119,123	80,972	89,824	289,919
Spectra (1% global FDR)	54,291	34,621	36,786	127,051
Proteins (1% global FDR)	1,747	1,443	1,379	2,007
Novel Proteoforms	363	265	258	445

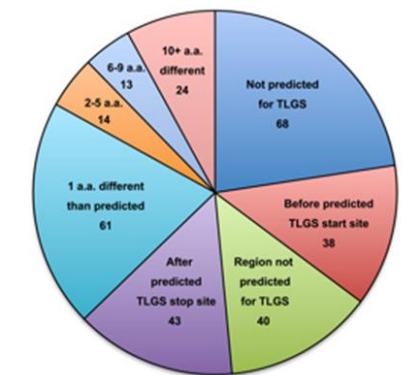

D Differentially Expressed Proteins

	OCT	TOR	J-IBA	M-IBA	APR	Total
	98	119	153	123	108	Unique
	12	14	23	14	20	Upregulated
	30	52	57	60	56	Downregulated
	36	47	58	38	15	

A Novel Peptide Sequences by iTRAQ Run

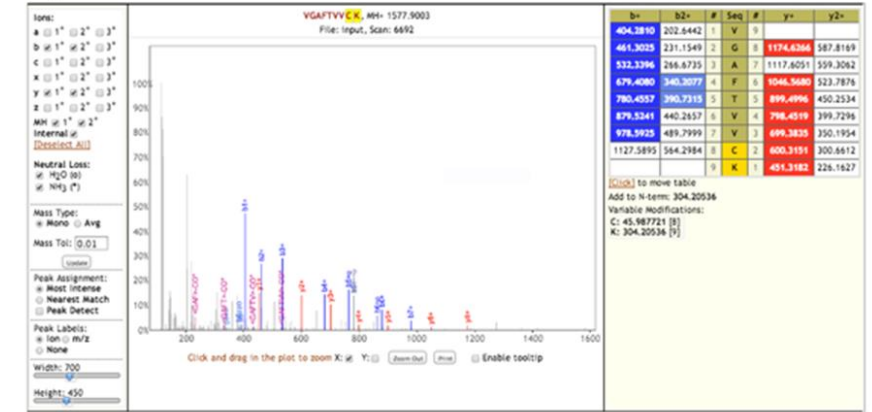

B Novel Peptide Sequences by Category

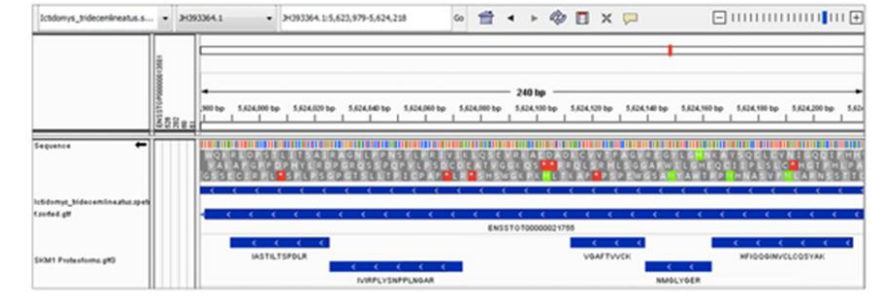

Mapping of proteins to genome for annotation

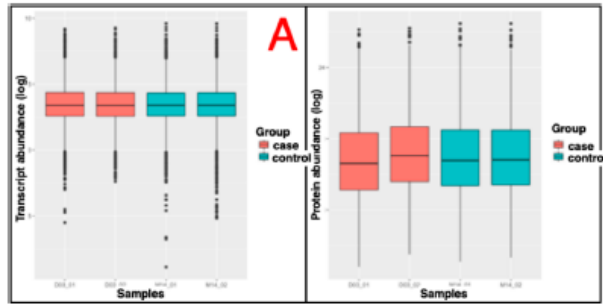

C Spectral Evaluation

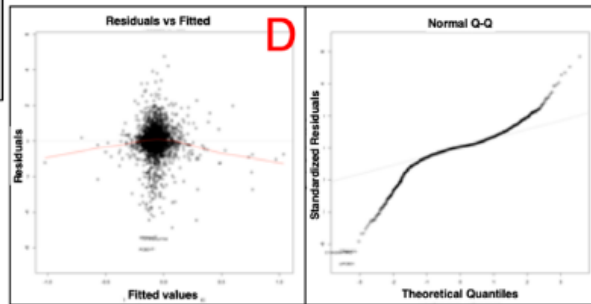

D Visualization on the Genome

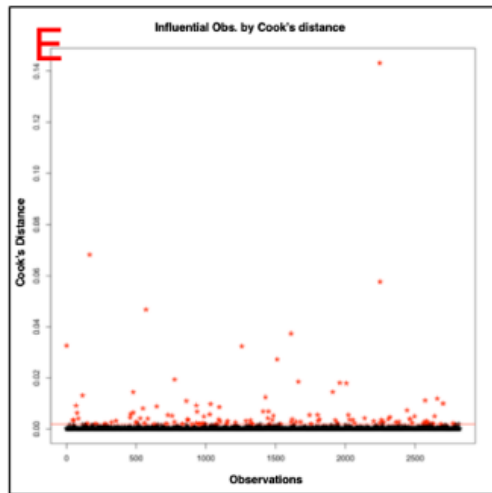

Example application: comparative proteo-transcriptomics in bovine

METAPROTEOMICS

Microbiome: Microbial genetic potential and response

Multiple studies have shown correlation of microbial composition with physiological conditions.

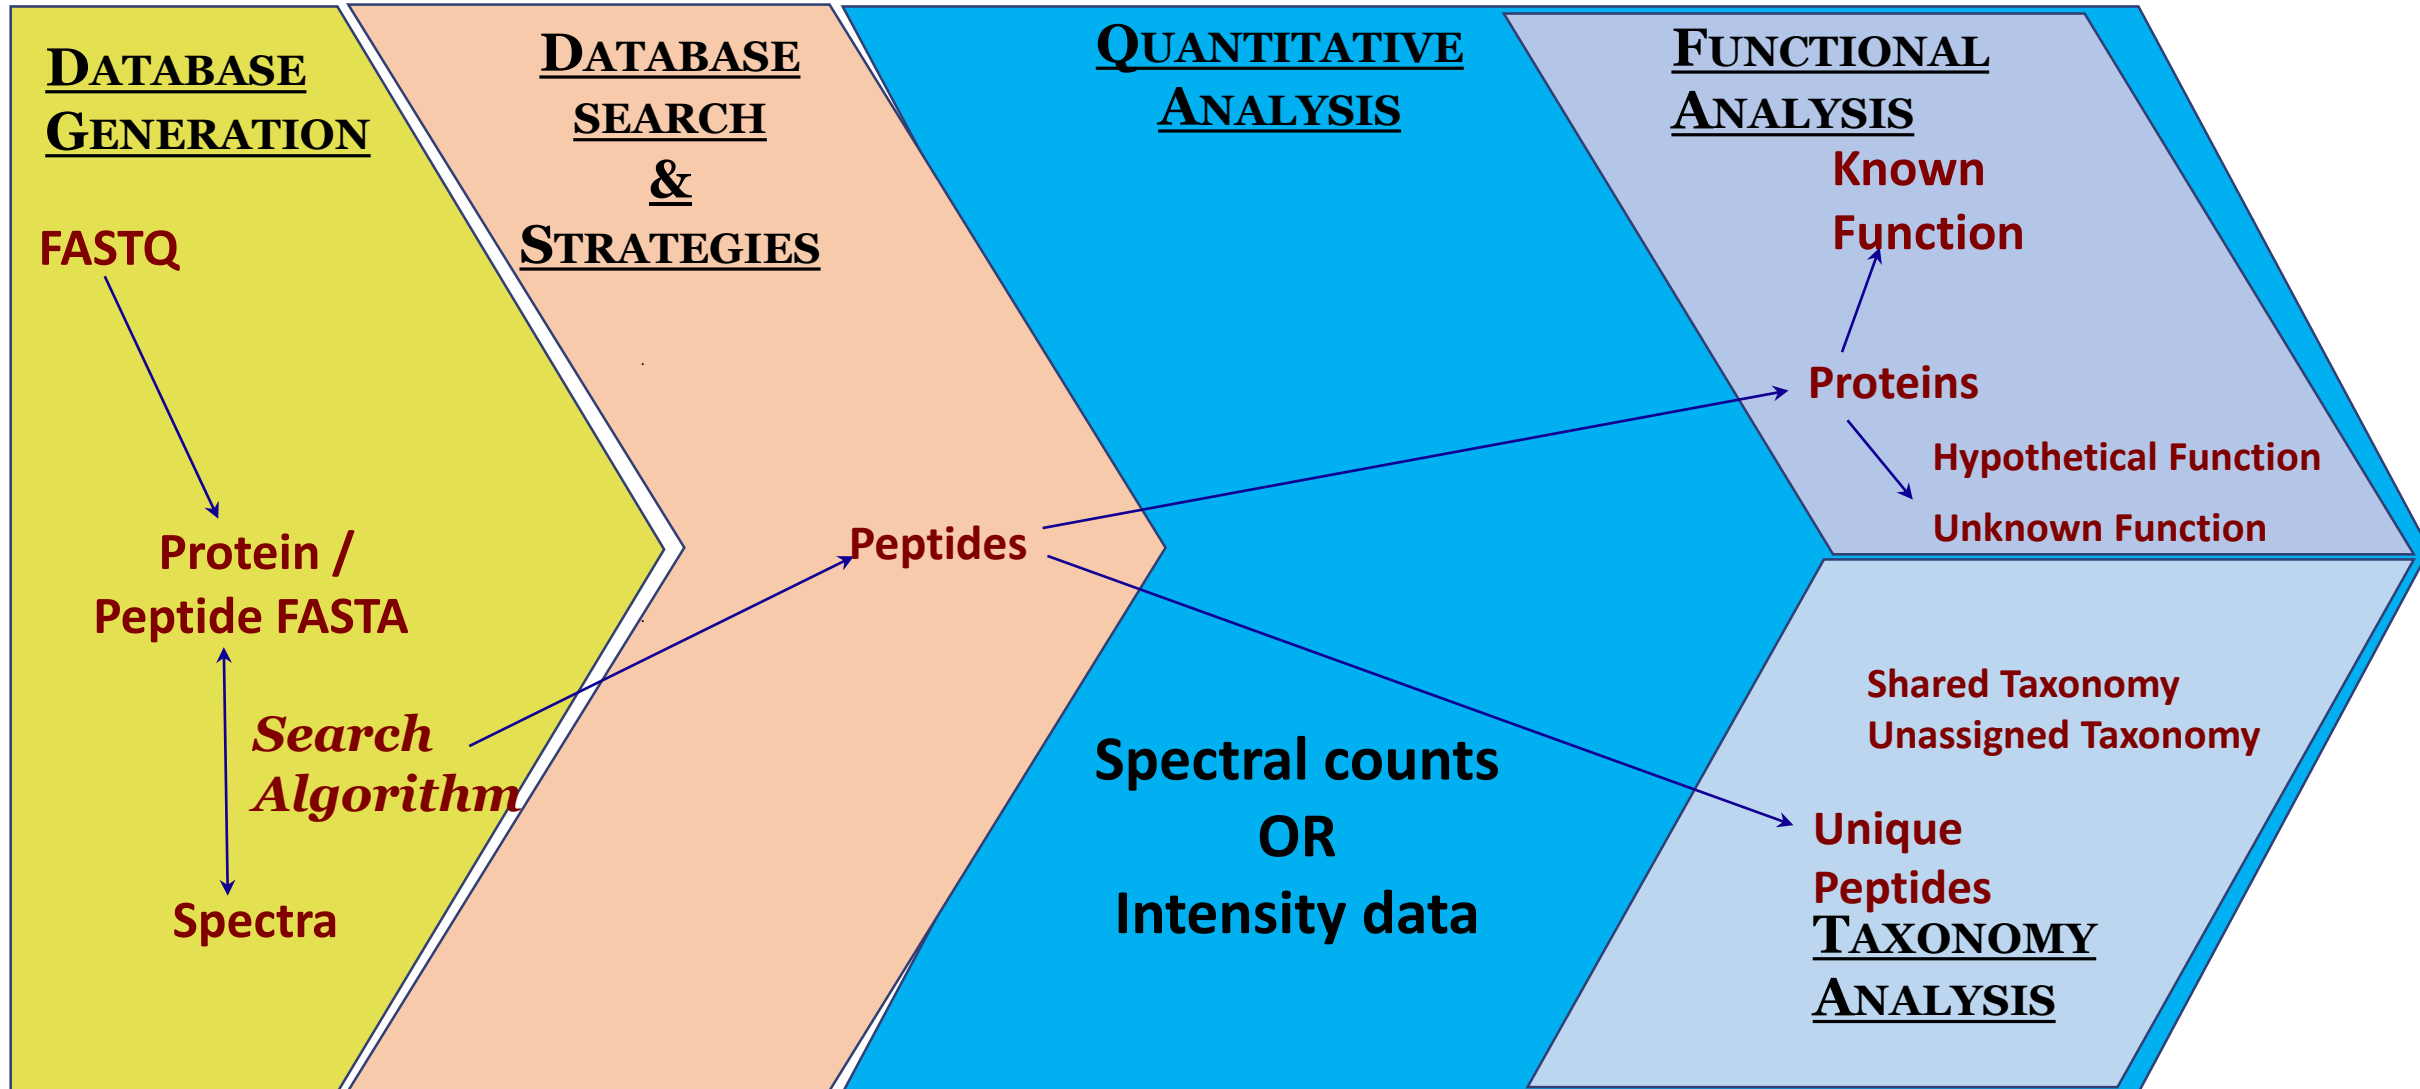

Metagenomics: DNA Sequencing identifies species present within complex community (16S rRNA and Whole Genome Sequencing).

Metatranscriptomics: RNA Sequencing identifies species present and possible functions within complex community (RNASeq).

Metaproteomics:

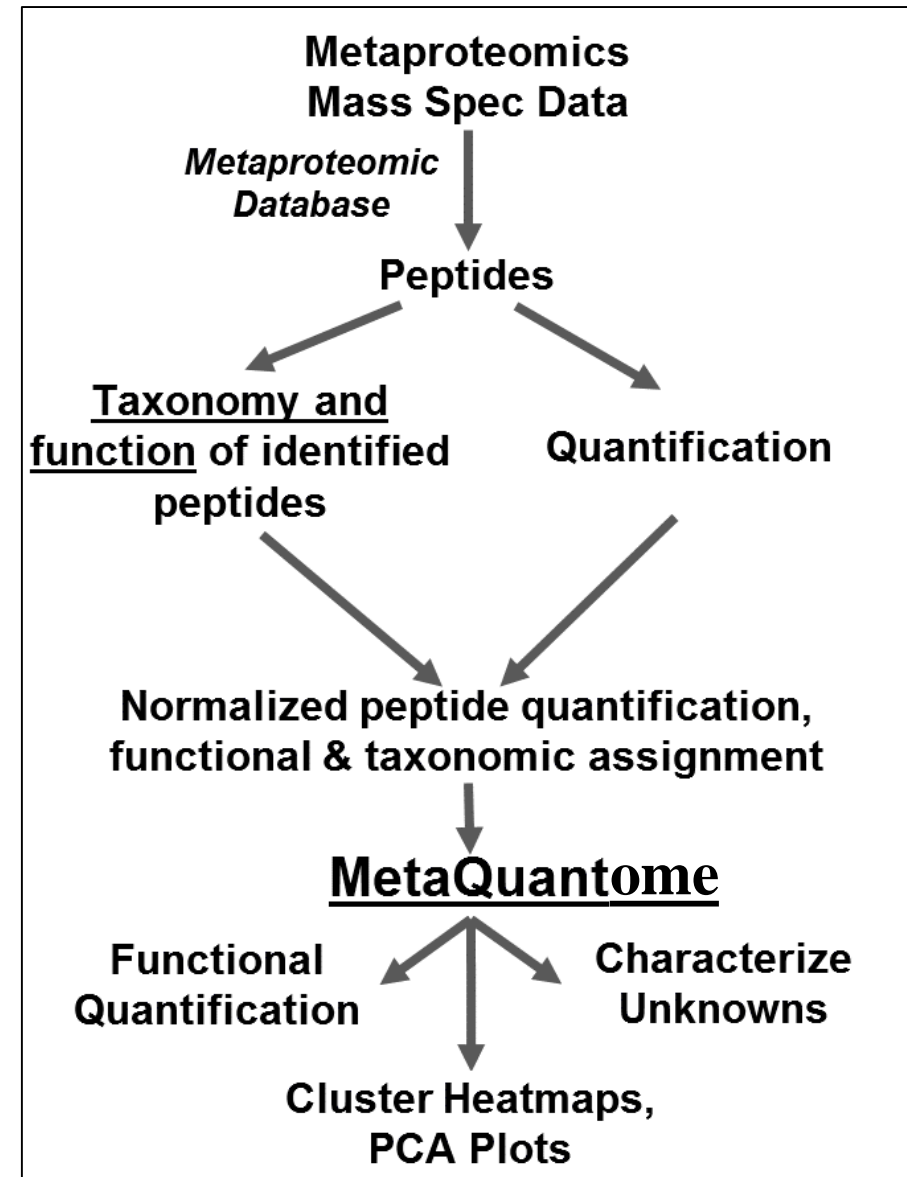

The large-scale characterization of the entire protein complement of environmental microbiota at a given point in time. Potential to unravel the mechanistic details of microbial interactions with host / environment by analyzing the functional dynamics of the microbiome.

METAPROTEOMICS WORKFLOW

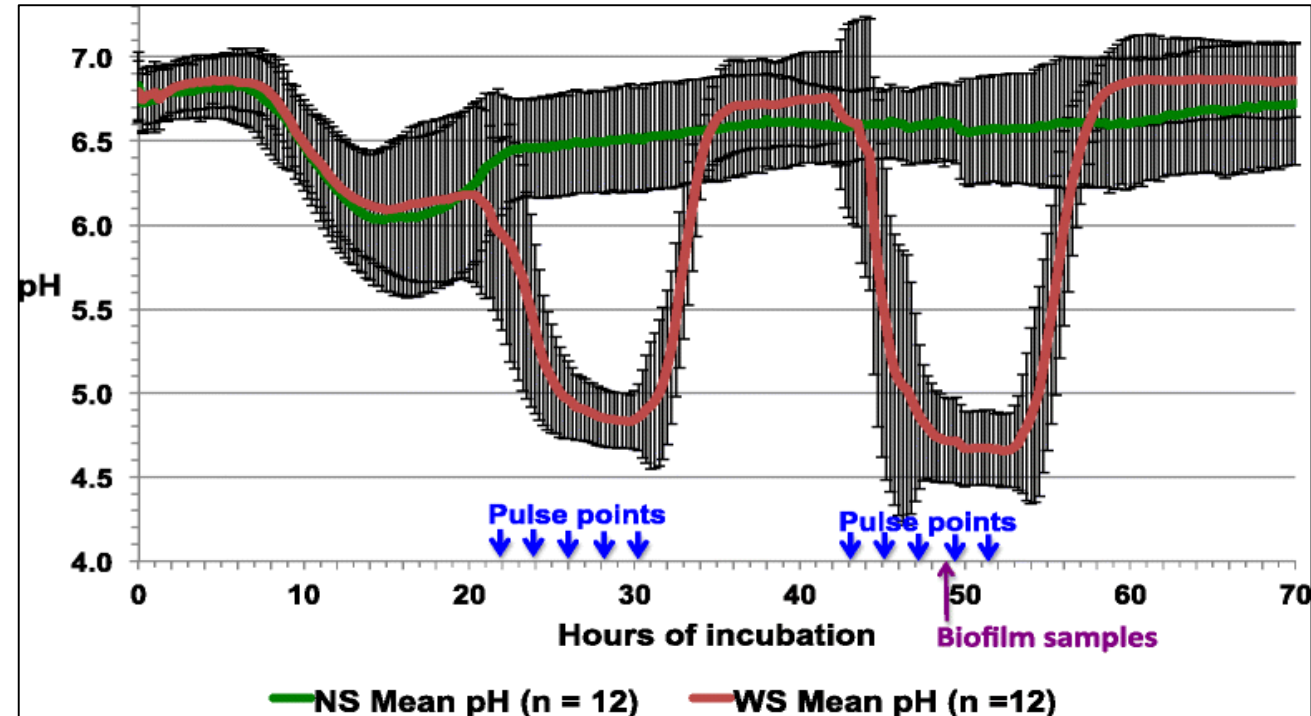

METAQUANTOME

- **metaQuantome allows for robust quantitative functional & taxonomic analysis from metaproteomics datasets.**
- **Quantitative:** *Supports analysis of multiple samples, including comparison across multiple experimental conditions*
- **Support for function-taxonomy interaction analysis:** *Leverages taxonomic and functional information of the same dataset*
- **Flexible & Accessible:** *Free and open source – available on Github, Python Package Index, Bioconda, and Galaxy*

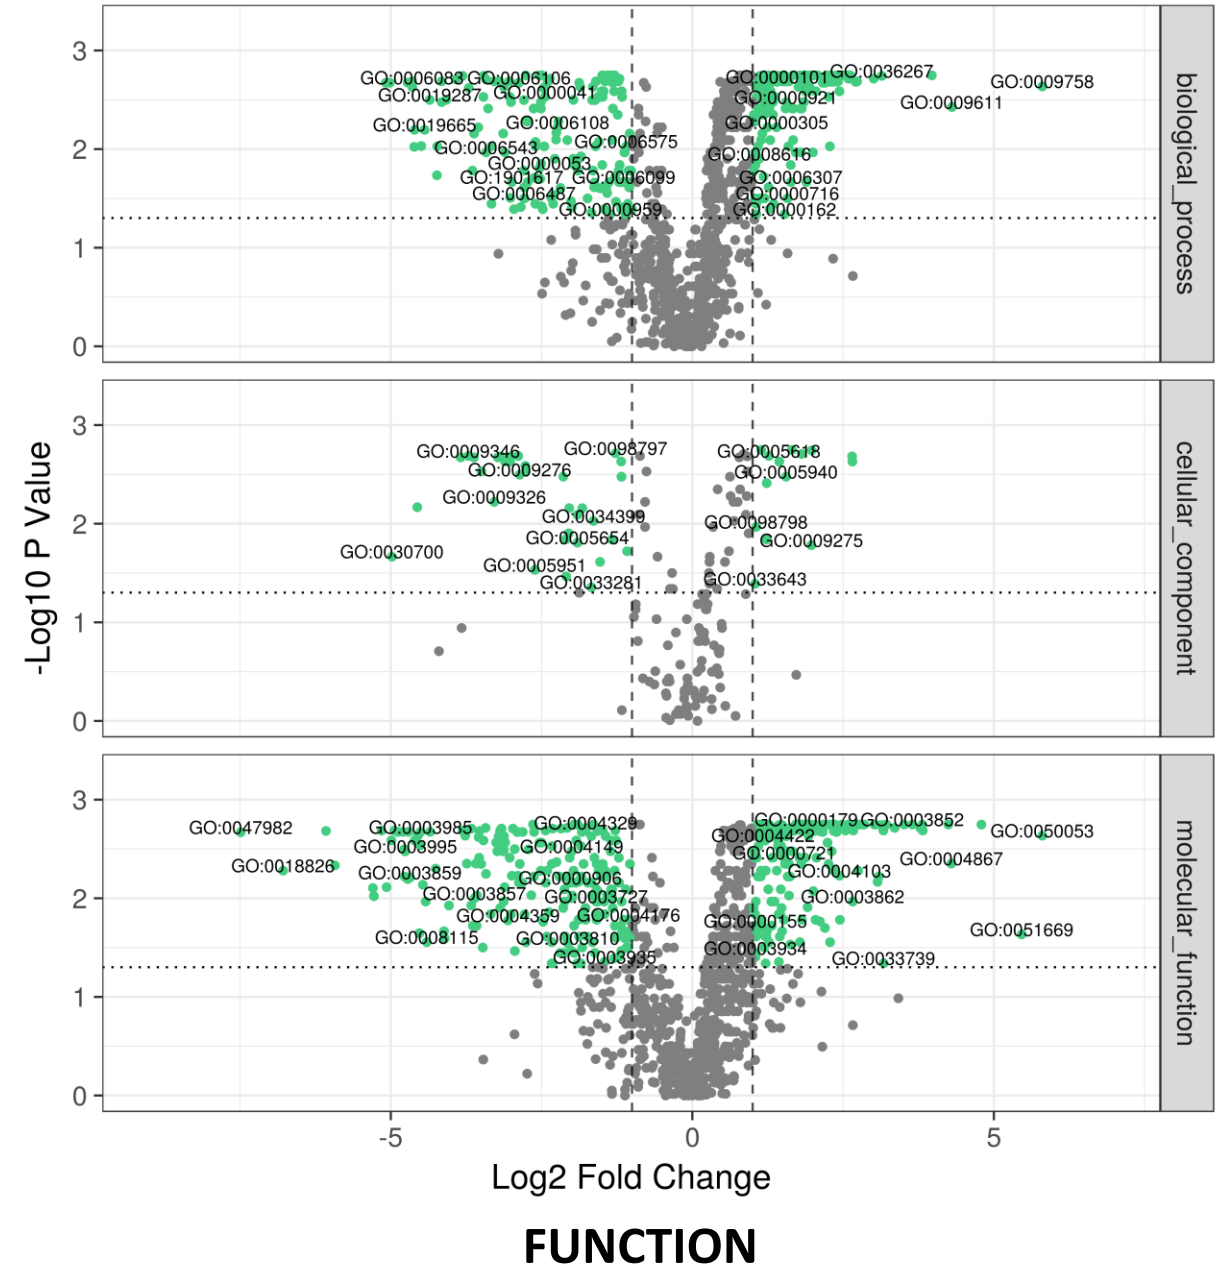

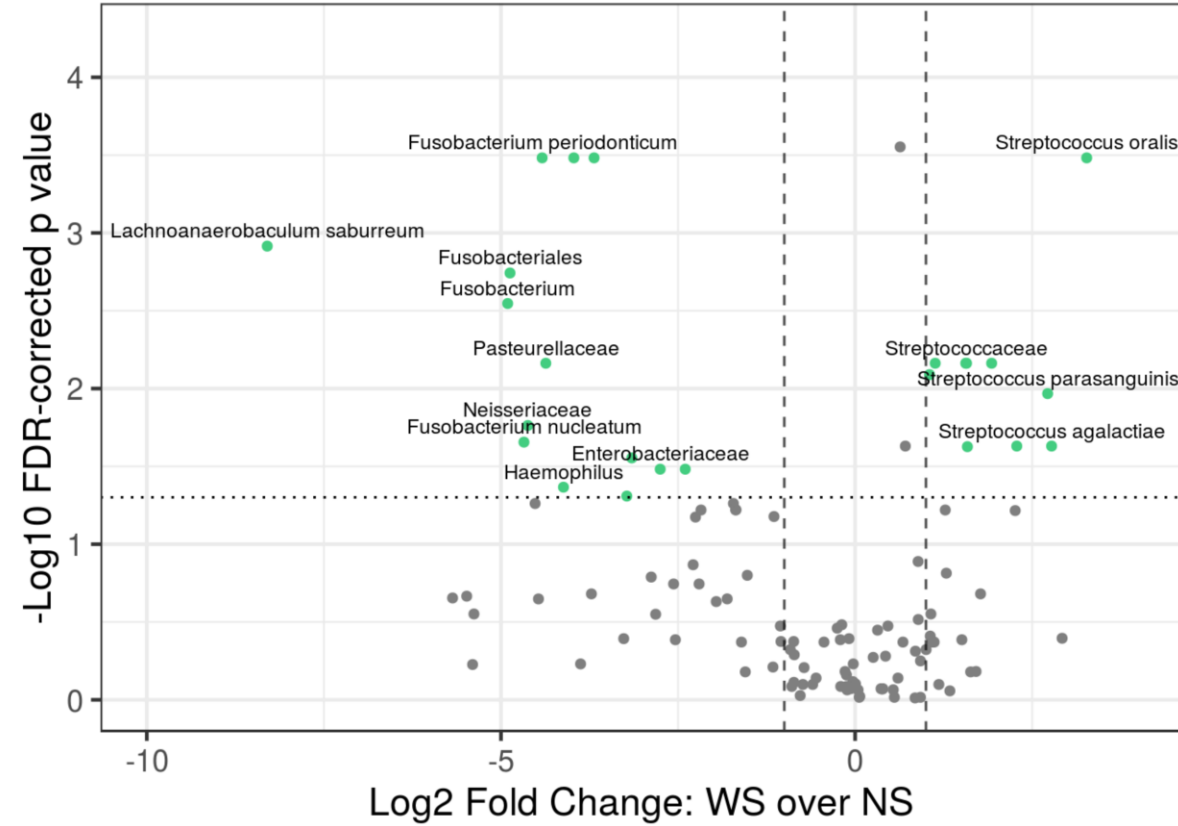

CASE STUDY : SUCROSE-INDUCED ORAL DYSBIOSIS

- Mass spectral data was acquired from plaque samples from **twelve subjects at high risk for dental caries grown in biofilm reactor** in the presence (With Sucrose, or **WS**) and absence of sucrose (No Sucrose, or **NS**) (12 in each group, 24 total samples)
- Mass spectra were searched against the Human Oral Microbiome database (HOMD) to identify microbial peptides.
- Quantitation, functional annotation, and taxonomic assignment was performed in Galaxy; **metaQuantome** was used to analyze the results.

Rudney et al., BMC Microbiome [DOI: 10.1186/s40168-015-0136-z](https://doi.org/10.1186/s40168-015-0136-z)

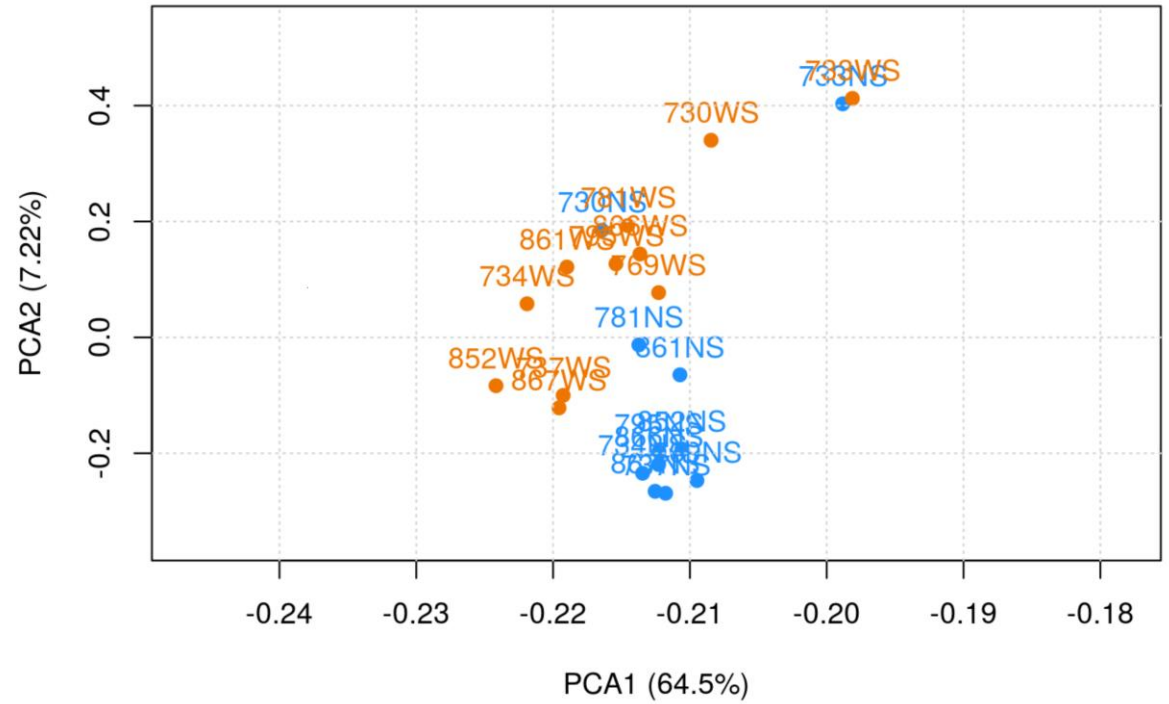

ORAL DYSBIOSIS RESULTS: VOLCANO PLOTS

ORAL DYSBIOSIS RESULTS: PCA PLOTS

TAXONOMY

FUNCTION

ORAL DYSBIOSIS RESULTS: HEATMAPS

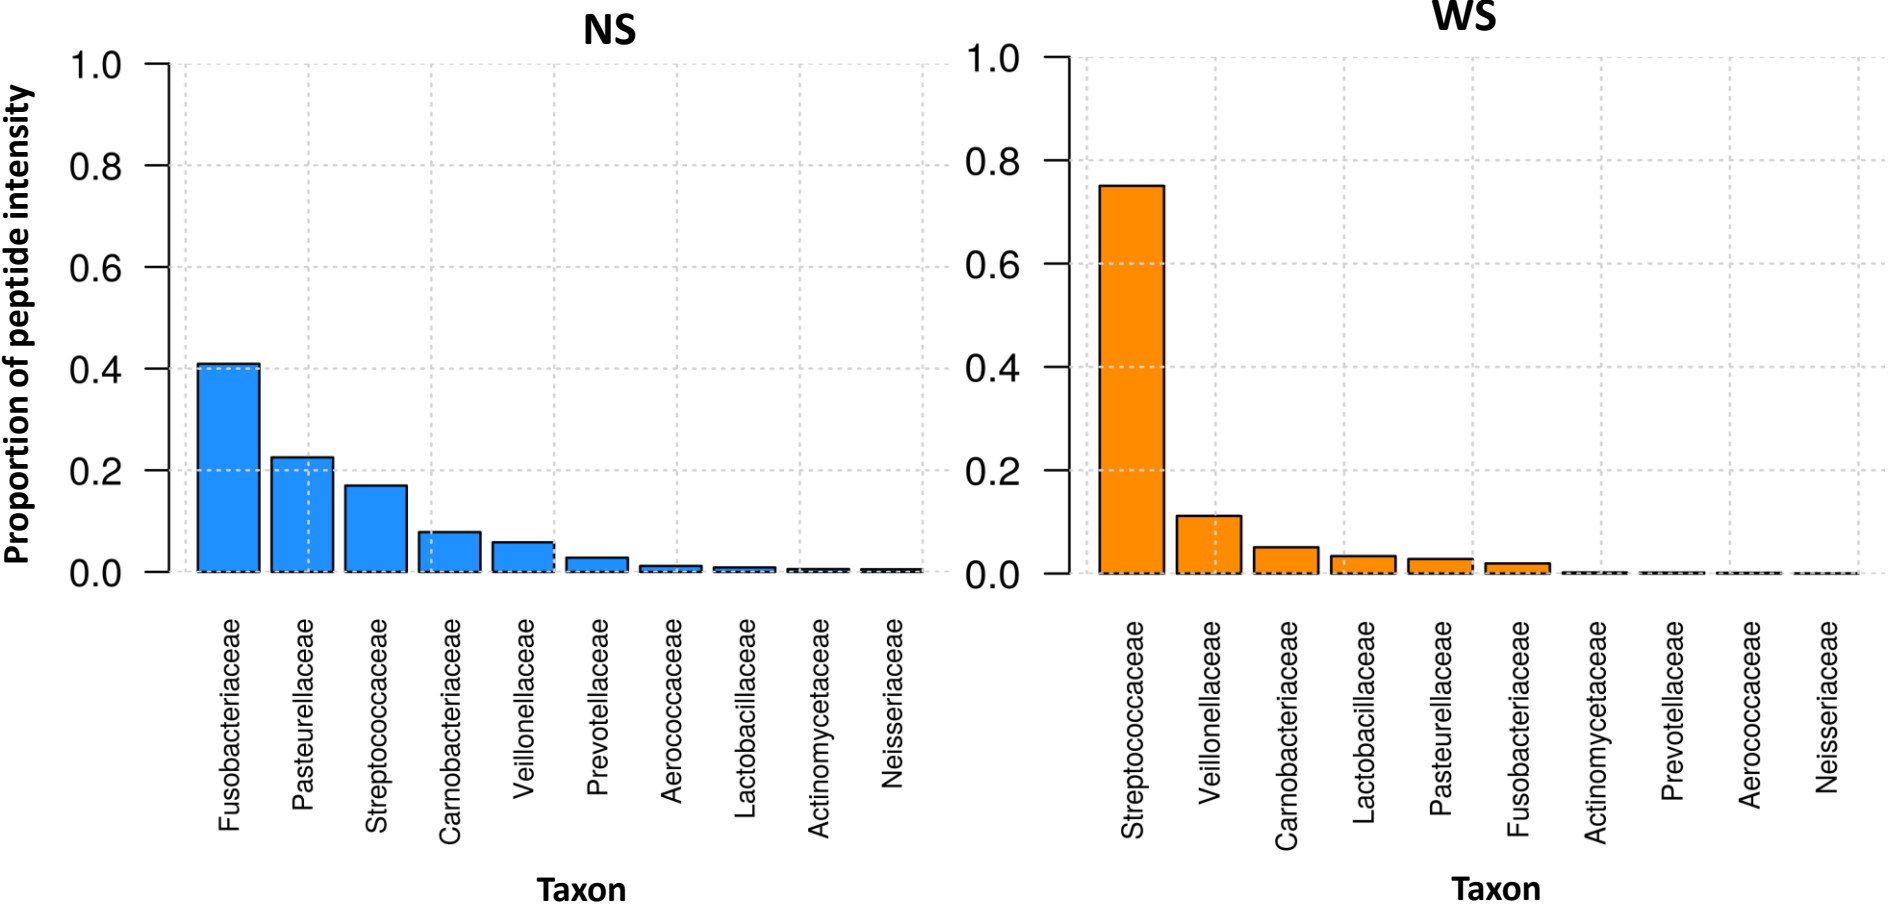

TAXONOMY

FUNCTION

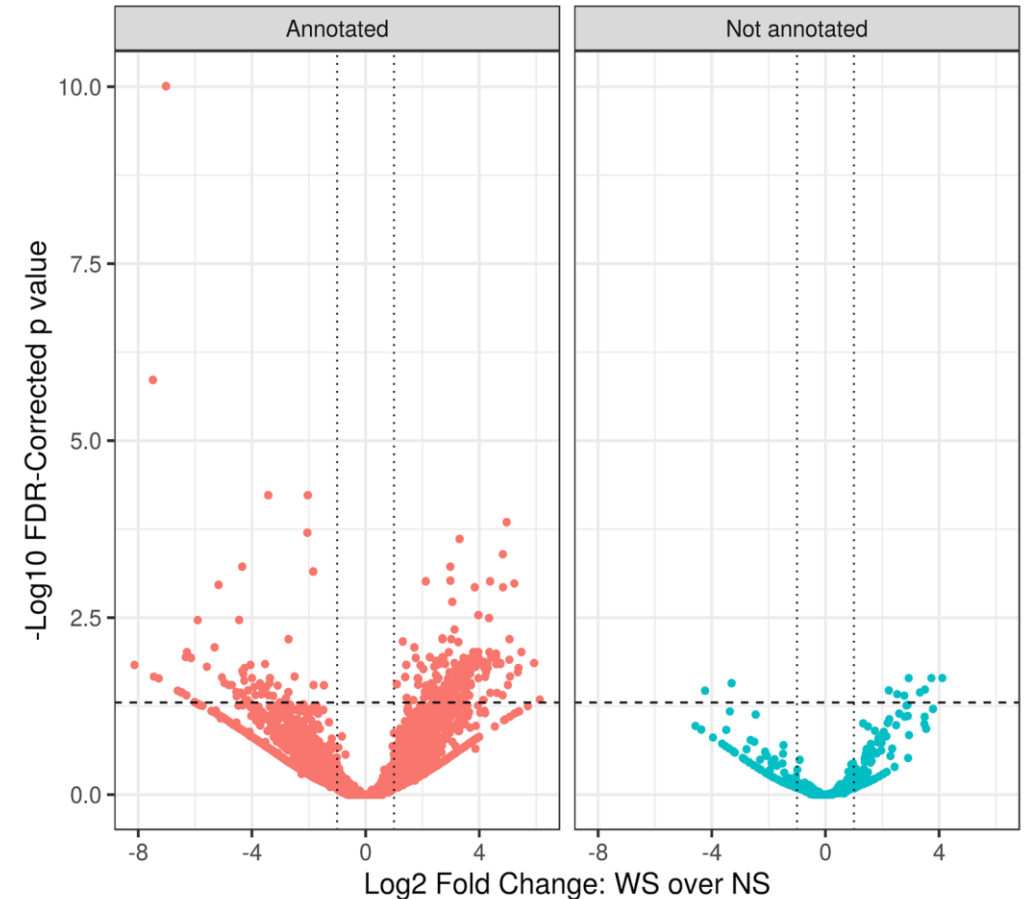

ORAL DYSBIOSIS RESULTS: FUNCTION-TAXONOMY

Taxonomy units contribution to carbohydrate metabolism

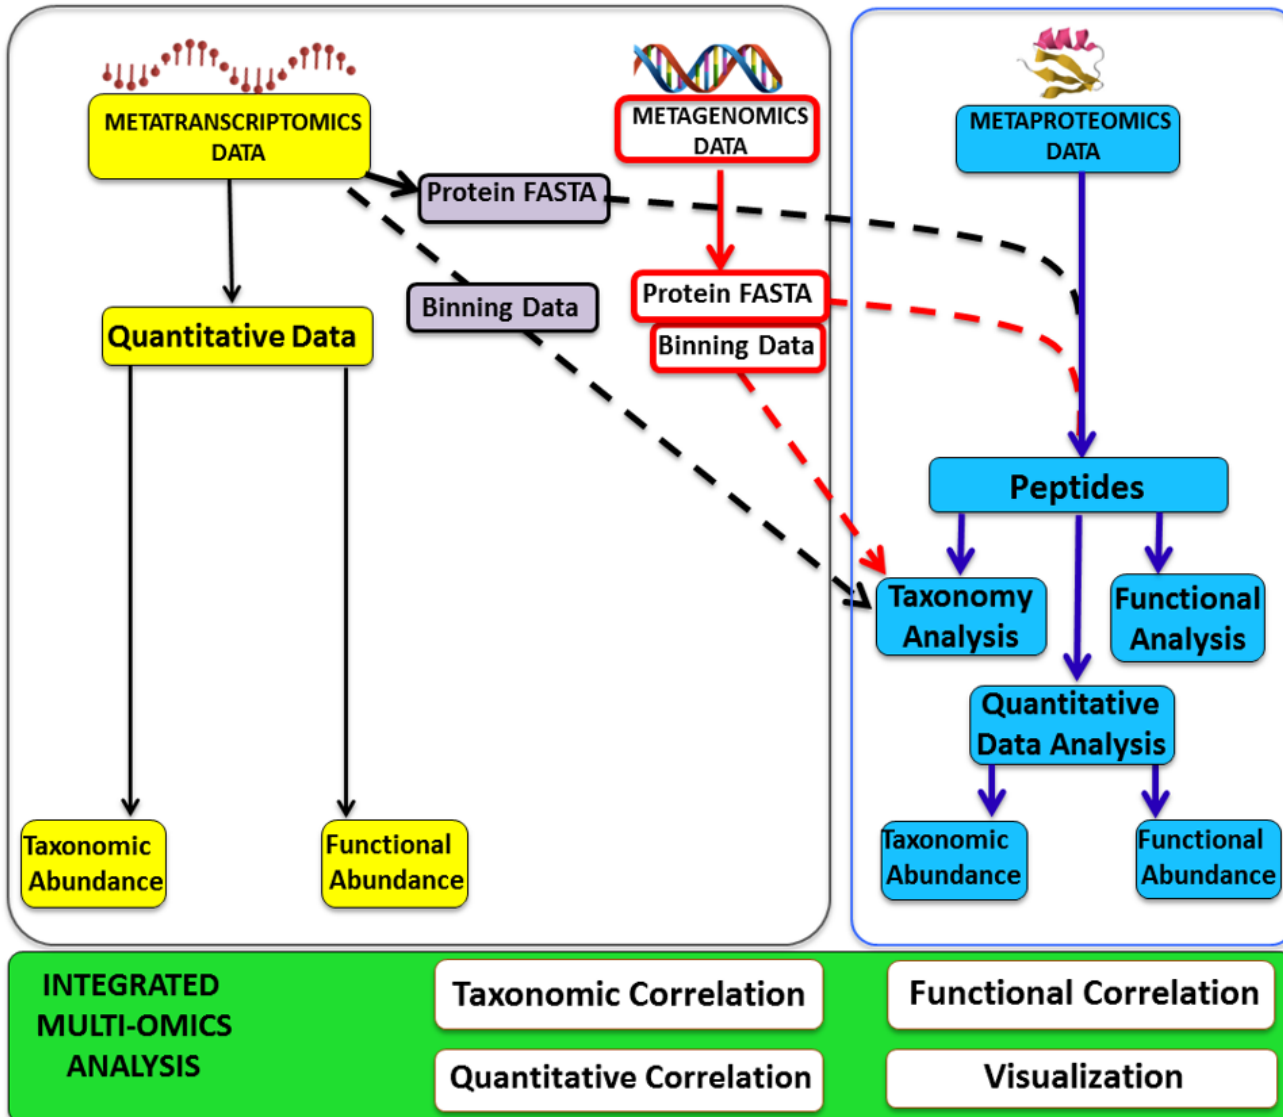

FUTURE DIRECTIONS

- Analyze more datasets (clinical and environmental)
- Alternative tools for quantitation, taxonomy & function.
- Investigate peptides/proteins of unknown function/taxonomy
- Integrate the metaproteomics workflow with an existing metatranscriptomics quantitative analysis & visualization workflow (ASaiM) within Galaxy.

Differential expression analysis: proteins of known (L) and unknown (R) function

MULTI-OMICS APPROACH FOR FUNCTIONAL MICROBIOME ANALYSIS

- Multi-omic approaches (metatranscriptomics & metaproteomics) characterize the functional molecules that may contribute to microbial responses.
- We are implementing a metatranscriptomics and metaproteomics quantitative analysis pipeline within Galaxy-P.
